STEEL & PIPE

•

Square Tubing

Steel piping and tubing have a variety of uses in the automotive, plumbing, conveyance, scaffolding, construction, marine, chemical, fuel, appliance and manufacturing industries – to name a few. Structural hollow sections are especially popular in construction, as they resist buckling loads more effectively than solid sections. They also have a yield high strength-to-mass ratio and flexural and torsional stiffness. Stainless steel tubing is typically used in applications that require rust and corrosion resistance.

Palisade Fencing

Alberton Steel and Pipe branches stock a wide range of **palisade fencing** products, which are supplied to fencing contractors, installers and DIY markets.

Palisade fencing is an ever-popular solution to **residential, commercial, municipal and industrial perimeter security needs**. It offers **both visual and physical deterrence**; and, unlike other fencing solutions, palisade fencing maintains an amicable suburban façade. Furthermore, steel palisades are unparalleled in strength and therefore incredibly durable. Galvanisation ensures rust resistance and added longevity to the palisade panels.

We offer the following **palisade-related products**:

- Steel Palisade Panels;
- Steel Palisade Posts;
- Steel Palisade Spikes;
- Steel Gates;
- Steel Palisade Gates;
- Steel Pedestrian Gates;
- Galvanised Palisade;
- Security Fencing;
- Security Gates; and
- Concrete Mix.

-
- # Reinforced Steel Bar Suppliers

- **Alberton Steel and Pipe** branches stock a broad range of reinforcing bars, commercially known as “rebar”. These are ribbed steel rods used to reinforce concrete structures from the inside by forming a “skeleton” around which the concrete is set. Concrete requires such reinforcement because of its low tensile strength and consequent demand for a substitute tension device lest the structure collapse. **Alberton Steel and Pipe** supplies rebar to major contractors with confidence, and also maintains the service levels required by smaller construction companies and owner-builders.
- We cut, bend and fix reinforcing steel for all concrete structures and can deliver the pre-fixed units to site, or have one of our qualified teams assemble the units on-site. Applications include reinforcing cages, columns, beams, welded mesh, structural fabric or NHBRC Standard Brickforce. We supply to specification and deliver on time, every time..
- **Alberton Steel and Pipe** supplies reinforcing HT round bars, SANS 920:2011 deformed bars (straightened or coiled), as well as SANS 283:2011 mild steel deformed bars and high tensile steel smooth bars – available in a variety of shapes
